

## **SPRINT 1 –DATA PREPROCESSING**

### **DATA PREPROCESSING:**

Data preprocessing is a process of preparing the raw data and making it suitable for a machine learning model. It is the first and crucial step while creating a machine learning model.

- Getting the dataset
- Importing libraries
- Importing datasets
- Analyzing the data
- Finding Missing Data
- Encoding Categorical Data
- Splitting dataset into training and test set
- Feature scaling

### **IMPORTING LIBRARIES:**

```
import pandas as pd
```

```
import numpy as np
```

```
import matplotlib.pyplot as plt
```

```
import seaborn as sns
```

### **IMPORTING DATASETS:**

```
df = pd.read_csv("water_potability.csv")
```

### **ANALYSING THE DATA:**

```
df.head();
```

```
df.describe();
```

```
df.shape
```

```
df.info();
```

## **FINDING MISSING DATA:**

```
df.isnull().any();
```

```
df.isnull().sum();
```

```
for feature in df.columns:
```

```
    if df[feature].isnull().sum()>0:
```

```
        print(f"{feature} : {round(df[feature].isnull().mean(),4)*100}%")
```

-----Fill missing values with median

```
for feature in df.columns:
```

```
    df[feature].fillna(df[feature].median() , inplace = True)
```

----- find duplicate rows in dataset

```
duplicate = df[df.duplicated()]
```

```
duplicate
```

### **### Finding missing value1**

```
d=pd.read_csv("water_potability.csv")
```

```
pd.isnull(d["Solids"])
```

### **# ##Finding missing value2**

```
d=pd.read_csv("water_potability.csv")
```

```
pd.isnull(d["Turbidity"])
```

### **### Finding missing value3**

```
d=pd.read_csv("water_potability.csv")
```

```
pd.isnull(d["ph"])
```

-----removing outliers

```
Q1 = df.quantile(0.25)
```

```
Q3 = df.quantile(0.75)
```

```
IQR = Q3 - Q1
```

```
print(IQR)
```

## **SPLITTING DEPENDENT AND INDEPENDENT COLUMN**

```
X = df.iloc[:, :-1]
```

```
y = df.iloc[:, -1]
```

## **SPLITTING DATASET INTO TESTING AND TRAINING:**

```
from sklearn.model_selection import train_test_split
```

```
X_train, X_test, y_train, y_test = train_test_split(X, y, test_size = 0.3,  
random_state= 5)
```
